**I. Կարդալ տեքստը և պատասխանել հարցերին՝ ընտրելով ճիշտ տարբերակը:
Read the text and answer the questions choosing the right answer.**

Line number

1. Imagine that you get an email one morning. It appears to be from your bank. The email warns
2. that someone broke into your account. It says that you need to sign in to check some things. You
3. click the link in the email. It takes you to a site that looks very much like your bank's. You enter
4. your username and password. You submit the form. You've just been phished!
5. **Phishing** is a type of attack that happens over the Internet. Users receive an email or text
6. message that seems like it came from a trusted source. These users are being deceived. They are
7. interacting with dangerous hackers. The attackers copy trusted companies. They send users to
8. web pages that look like the ones we use every day. When users login or provide sensitive,
9. important information, the attackers steal this data. Attackers want your data for many reasons.
10. They may use your data to commit identity cheating. They use your identity to buy
11. something with your credit. Then they receive the goods and you receive the bill. Or they may
12. want your password to take over a computer network. They may want access to private emails.
13. They gain access by tricking people into giving them their login info.
14. Phishing attacks are dangerous, but you can *spot* them if you pay attention. One thing to
15. watch is your address bar in your browser. Attackers use domains that look like the ones that we
16. trust, but they are not the same. The attackers often use the domain accounts-google.com. That
17. domain looks like google.com, but it isn't the same. When logging into Google, you should
18. always do it from google.com. Likewise, when logging into any account, make sure the address
19. matches what you expect. If you are unsure, search for the site and login from the main
20. domain. An even better way to secure your account against phishing attacks is to use 2FA: two
21. factor authentication. 2FA means that your account is secured with two keys. The first is your
22. password. The second key is a code that changes every few minutes. This code may be
23. generated by a 2FA app, like Authy. Or it can be sent to your cell phone on request. If you
24. activate 2FA on your accounts, an attacker will not be able to get in even with your password.
25. Phishing attacks are scary and common. The reason why they are common is that they are
26. effective. Many people accept appearances without suspicion. Browsing the Internet safely
27. requires a healthy amount of suspicion. Not everything is what it appears. Nobody is trying to
28. give you free money. Don't trust; verify.
